O-ACS Handguards

Design

The BA handguard concept is based on a platform of aerospace-proven materials and innovative design. Every yarn within the tube is formed from T700 carbon and shrouded within a protective jacket for all-weather durability and abrasion resistance. This jacket prevents cracking (common in filament wound handguards) and splinters (common in roll-wrapped handguards). All end caps are crafted from 6061 aluminum, hard anodized.

Heat Rejection

The open-architecture braid encourages natural air-flow, allowing heat to be blown off quickly, and provides excellent exposure for radiated heat to escape. Under sustained fire the barrel will be cooler and the handguard will cool up to 50% faster after firing than with any enclosed guard. This improves barrel life and decreases heat signature duration.

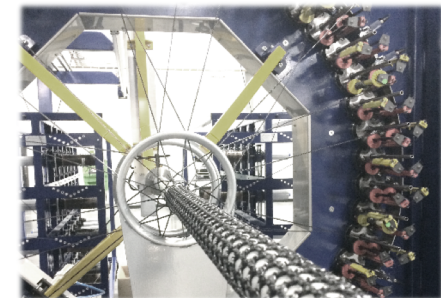

40 lbs Dumbbell Weight Display – SHOT Show

Strength & Durability

BA's carbon fiber structure can withstand 100 lbs of force in any direction. See our website for torture test videos and other field-testing data. Many 3-Gun shooters have run BA rails for multiples seasons with outstanding results.

Manufacturing

Braiding is revolutionizing the modern composites industry. Our braiding requires large, specialized machines to handle the high tension and precision required for lattice structure tubes. Computers control the speeds and tensions to ensure repeatable quality and dimensions.

CARBON BLACK AR-15 AR-10

"Budget friendly carbon fiber components at service weapon strength and race gun weight."

The Carbon Black rail meets BA's high standard for strength and heat rejection, and is capped with hard anodized aluminum rings for optimal impact resistance. It mounts on our standard ultralight barrel nut, and includes multiple M-LOK mounting slots.

Carbon Black EDGE

Carbon Black BLADE

MODEL	AR-15	AR-10
CARBON BLACK 7" EDGE	\$ 199	\$ 214
CARBON BLACK 9" EDGE	\$ 219	\$ 234
CARBON BLACK 12" EDGE	\$ 239	\$ 254
CARBON BLACK 15" EDGE	\$ 269	\$ 284
CARBON BLACK 7" BLADE	\$ 209	\$ 224
CARBON BLACK 9" BLADE	\$ 229	\$ 244
CARBON BLACK 12" BLADE	\$ 249	\$ 264
CARBON BLACK 15" BLADE	\$ 279	\$ 294

Weights (oz.)

	AR-15	AR-10
7"	4.8	5.9
9"	5.4	6.5
12"	6.6	7.7
15"	7.2	8.3

- > **Weight:** 1.7oz
- > **MSRP:** \$99

Molded grip base provides rigidity and style. Option "grip strip" which can be attached for extra traction. Designed to support the palm (not thumb web) for repeatable trigger pulls. A premium titanium screw is included, for the ultimate net weight-savings.

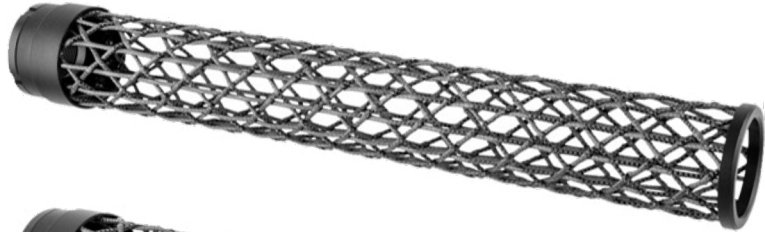

- > **Weight:** 4.3oz
- > **MSRP:** \$199.00

Reduce weight and improve cheek weld with the Carbon Black buttstock for AR-15. At only 4.3 oz (locking nut and plate not included), the Carbon Black Stock is an excellent choice for lightweight builds. Formed from continuous carbon textile, the seamless composite has no failure points and no milled or trimmed edges that might need sanding. Texture on the rear of the stock keeps it firmly on your shoulder. Polymer-lined buffer tube ensures long life for many thousands of rounds, and silent chambering compared to metal buffer tubes. **3**

Brigand Arms Releases Carbon Fiber Handguards For AR-15

Available in three different lengths, the all new carbon fiber handguard is incredibly lightweight and features a unique design.

Video: Is This the Lightest AR Handguard in the World?

Brigand Arms Carbon Fiber Handguard

It's always fun to stumble upon a new product of SHOT Show. This year, that prize goes to Brigand Arms, makers of the most interesting, and lightest, AR handguard I've ever seen.
